DUBAS CATTLE CO.

Real Value Bull & Heifer Sale

MARCH 3, 2018

Live Auction begins at 6 pm CT.

Held at Bull Lodge

4.5 miles west of Fullerton, Neb on Hwy 22.
Turn South on gravel road 218, go south 1/4 mile.
Bull Lodge is on the left.

Welcome to our second annual bull sale! First off we would like to extend a great thank you to all of our customers who came out last year and years past to support us. It is our mission to produce the best possible bulls we can without selling out in any particular direction. We feel phenotype and functionality are the number one qualities to have in a herd sire, so we put those first. The bulls have been fed with one pound of ADM Amino Gain in a high roughage ration. We put a lot of focus on developing them at a rate that allows them to mature into sound breeders, while trying to avoid issues such as fertility, longevity, and pasture melt down. We feel we have a strong set of bulls this year that will accommodate the needs of our customers and their cow herds. All the bulls have passed a breeding soundness exam and our entire herd is on a complete vaccination program, working with Dr. Lance Kurz with Country Side Vet Clinic in Fullerton. The bulls have all had their pasture shots and will be ready to turn out.

-Dubas Cattle Co.

SALE LOCATION:

The sale will be held 4 ½ miles west of Fullerton on Hwy 22 at the Bull Lodge.

AUCTIONEER:

Curtis Wetovick 308-550-1898

TRANSPORTATION OF BULLS:

Buyers who wish to load their bull(s) out sale day will receive \$100 discount for each bull. We will offer free delivery within the state of Nebraska. We would like all bulls to be picked up or delivered before April 1st. If for some reason that doesn't work for you please let us know and we will accommodate to your needs. Regardless of price, all bulls will be guaranteed for their first breeding season.

FEMALES:

Along with Mr. K Angus and T&E Angus of Clarks, Neb., we are excited to offer a strong set of replacement heifers and first calf pairs. All heifers are current on all their vaccinations including Bangs. If buyer chooses to have us A.I. breed your heifer(s) for an additional fee, please contact one of us after the sale. Transportation will be the responsibility of the buyer.

SALE DAY/VIEWING/BIDDING:

We are pleased to announce online bidding will be available through DVAuction. Videos can be found prior to the sale at www.DVAuction.com

SALE DAY PHONES:

Gene Dubas 308-380-2727 Jarrod Dubas 308-550-0396

This Stud son is phenotypically flawless, he presents himself with a smooth head and shoulder, following him all the way back to a big rear hip. He comes in a more moderate package and will be sure to produce some high quality females. His EPDs might suggest usage for cows, with his actual 70lb BW and two generations of calving ease on the top side, I wouldn't be afraid to use him on heifers.

This is a black red gene carrier, and a huge outcross for the Red Angus breed. He's a Basin Payweight 1682. His dam is an extremely fertile Roosevelt daughter who's never missed an A.I. date. She is a picture perfect cow with a tremendous udder structure. I look forward to seeing what this bull will mature into. Use him on Black Angus cows, he will throw black hided calves. On red hided cows he will have a 50% chance of throwing either black or red calves.

Selling 1/2 interest with option to double purchase price and own 100%. Here's another exciting chance to own a heifer straight from the top of our replacements, she caught everyone's eyes who viewed her this summer, 739 combines one the breeds hottest sires Jindra Acclaim and one of the best female producing sires Bismark. 739 is a moderate framed heifer with a big hip and tons of muscle and power to go along with her impeccable pedigree she is top 1% for YW and top 2% for WW. Her beautiful two year old Bismark dam has BR of 1@108 and WR of 1@114 her pathfinder granddam is a herd favorite with BR of 9@109 and WR of 9@101.

Driving the science of better breeding

There's little room for error in the cattle business. Producers need the most advanced information to make smart selection decisions, and Angus Genetics Inc. (AGI) provides it through genomic-enhanced expected progeny differences (GE-EPDs).

GE-EPDs have become the industry standard for herd improvement, building on decades of science-backed genetic evaluation tools originated and maintained through the American Angus Association®, home to the largest and ever-growing single-breed beef cattle database.

EPDs that traditionally contained all pedigree, performance and progeny information now also include results from available genomic, or DNA, tests. Breeders who use genomic technology give buyers access to AGI-generated GE-EPDs that provide:

Increased predictability and decreased risk for young and unproven animals due to enhanced accuracy of EPDs

Better characterization of genetics for difficult-to-measure performance traits (such as carcass traits, maternal traits and feed efficiency)

The ability to make more rapid progress for traits that are important to you, due to:

- more accurate selection
- easier identification of genetic outliers
- the ability to propagate young animals with confidence earlier in their lives

In fact, GE-EPDs on unproven animals have the same amount of accuracy as if they had recorded 8-33 calves, depending on the trait. That's valuable insight, offered regularly through the breed's weekly national cattle evaluation.

Trait	Progeny Equivalent	Trait	Progeny Equivalent
Calving Ease Direct	28	Milk	33
Birth Weight	21	Calving Ease Maternal	18
Weaning Weight	26	Mature Weight	11
Yearling Weight	21	Mature Height	8
Dry Matter Intake	8	Carcass Weight	9
Scrotal Circumference	13	Yearling Height	11
Docility	10	Carcass Marbling	9
Heifer Pregnancy	14	Carcass Ribeye	12
		Carcass Fat	10

How do you know if EPDs are genomic-enhanced?

Ask your breeder, refer to the registration paper, or look for the AGI GE-EPD logo, Angus GS™ powered by partner Neogen GeneSeek or the HD50k or i50k by partner Zoetis. These images indicate animals for which low-density or high-density genomic testing has been conducted and incorporated by AGI into GE-EPDs

Calving-ease, maternal and carcass

Excellent Answer is an exciting young bull that combines calving ease, maternal and carcass in a very phenotypically correct package and as of this writing, he ranks top 1% for Calving Ease Maternal EPD and top 3% for HerdBuilder index, with rankings among the top 10% of the Red Angus population for GridMaster index, Calving Ease Direct EPD, Yearling Weight EPD, Stayability EPD, and hot Carcass Weight EPD.

Offering depth of body with great rib shape and a big top and thick rear end in a moderate frame size package with very good structural correctness and an ideal hoof shape, Excellent Answer hits all the targets for the economically important traits while maintaining excellent phenotype and structure.

Number 2 among Angus sires at ORigen for \$Beef value index

The Number 2 option from ORigen as of this writing for hot Carcass Weight EPD with one of the top four values for \$Beef value index and one of the top seven Yearling Weight EPD values along with a top 1% \$Feedlot valued index, this \$30,000 top-selling yearling of the 2015 Wagonhammer Bull Sale combined an 84 pound birth weight with a 775 pound adjusted weaning weight for a ratio of 130 and went on to a phenomenal adjusted yearling weight of 1,559 pounds for a yearling ratio of 126 in the grewat performance program.

Combining outstanding eye appeal, structural soundness and individual performance with a tremendous genomic profile, this powerful young sire ranks among the top 12 of all active Angus sires for \$Beef value index as of this writing and he has the genetics to add performance at every point of measurement that occurs in the beef industry.

**Owners: Mr. K Angus, Clarks, NE &
Wagonhammer Angus Ranch, Albion, NE**

AMERICAN ANGUS ASSOCIATION®

SELECTION TOOLS

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

GROWTH

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height EPD (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Docility (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight EPD (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height EPD (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

AMERICAN ANGUS ASSOCIATION®

SELECTION TOOLS

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

CARCASS

The genetic evaluation produces a single set of EPDs for carcass weight, marbling score, Ribeye area and fat thickness. The units of measure are in carcass trait format and analyzed on an age-constant basis.

Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value indexes, are multi-trait selection indexes to assist beef producers by adding simplicity to genetic selection decisions. \$Values are reported in dollars per head, where a higher value is more favorable. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

Weaned Calf Value (\$W), an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Feedlot Value (\$F), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

Grid Value (\$G), an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

Quality Grade (\$QG) represents the quality grade segment of the economic advantage found in \$G. \$QG is intended for the specialized user wanting to place more emphasis on improving quality grade. The carcass marbling (Marb) EPD, which is influenced by carcass marbling scores and ultrasound percent intramuscular fat (% IMF) measurements, contribute to \$QG.

Yield Grade (\$YG) \$YG represents the yield grade segment of the economic advantage found in \$G. \$YG is intended for the specialized user wanting to place more emphasis on red meat yield. It provides a multi-trait approach to encompass ribeye, fat thickness and weight into an economic value for red meat yield.

\$G combines both \$QG and \$YG, and may be the best carcass decision tool for focusing on quality and red meat yield simultaneously.

Beef Value (\$B), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.
